

Rosengrens Lateral III – 32"

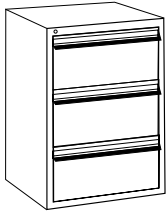

Two-hour fire protection of documents

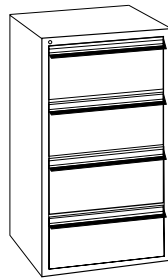

Rosengrens Lateral III is a range of slim, space-saving filing cabinets for the storage of A4 hanging files. Much narrower than standard cabinets, Lateral III is designed for offices which do not have a lot of space. Files can be arranged laterally as well as vertically inside the drawers. The range has been tested, approved and certified for two hours' fire protection of paper documents and includes a three-drawer and four-drawer model. The cabinets have central locking and an interlocking feature which ensures that only one drawer can be opened at a time.

Storage Capacity

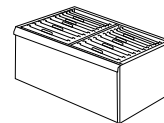

With lateral storage

3 drawers	2196mm
4 drawers	2928mm

With vertical storage

3 drawers	2214mm
4 drawers	2952mm

Fire protection: The Rosengrens Lateral III filing cabinet has been tested and certified by SP (Technical Research Institute of Sweden) in accordance with the NT Fire 017 – I20 Paper standard. With external temperatures in excess of 1000°C, the test procedure exposes the cabinet to fire for two hours, after which time the documents inside remain unharmed.

For extra protection, Lateral III has a day-catch fitted to each drawer. This ensures that as long as a drawer has been pushed shut, its contents are completely protected from fire, even if the cabinet is unlocked. Furthermore, should the filing cabinet be exposed to fire and one of the drawers has been left open, the contents of the closed drawers still remain completely protected.

Design: Lateral III has a slim, space-saving design for the lateral or vertical storage of A4 hanging files. Whichever arrangement you choose, the file capacity is virtually the same.

The cabinet has been constructed to offer fire protection for two hours and still have extremely thin walls. This not only maximises the interior storage capacity, but also reduces the cabinet's weight, making transportation and installation much easier and cheaper.

Locks: The Lateral III has a central, high-quality key lock which locks all drawers simultaneously and an interlocking feature which only allows one drawer to be withdrawn at a time.

Quality and Environmental Management Systems: Lateral III is manufactured in accordance with ISO 9001 for quality management systems and ISO 14001 for environmental management systems.

Rosengrens Product Guidelines: Lateral III has been tested and approved in accordance with Rosengrens Product Guidelines, based on all relevant European standards. The aim is to check user-friendliness, safety and product lifecycle, as an assurance to customers that our products will live up to the highest expectations.
